### What is Wetland Tracker?

Wetland Tracker is an interactive tool that displays information about modern and historical wetland habitat in California. Wetland Tracker catalogues planned, in progress, and completed wetland restoration, preservation, creation, and enhancement projects. The Bay Area Wetland Tracker is a product of the Bay Area's Wetland Regional Monitoring Program (WRMP) and LANDSCAPE ASSESSMENT disseminates WRMP assessment results.

**Purpose** 

The primary purpose of Wetland Tracker is to give wetland scientists, managers, and the interested public access to authoritative information about where California's wetlands are and how they are doing. Tracker enables interested parties to track the progress of restoration and mitigation projects. The San Francisco Bay Area Tracker

covers wetlands and habitat in both the tidal portions of the Bay and higher up in the watershed. Tracker's base maps provide information on the extent of historical and modern habitat. This allows users to consider the impact of restoration and mitigation efforts in a watershed and regional context.

#### Who uses **Wetland Tracker?**

State and Regional Water **Resources Control Board staffs** Local and regional agency staffs **Environmental consultants** Interested public **NGOs** 

LANDSCAPE ASSESSMENT

**RAPID ASSESSMENT** 

**Tracker** is based on open source software and continues to evolve. Advanced mapping and web tools are being used to create habitat acreage reports and enhance ease of use.
